

UNIQUE TREATMENT

The concentration of radon in one radon bath reaches therapeutically ideal values of (4 - 5 kBq / liter) with the temperature of the water between 35 - 37 °C.

The physicians recommend to take optimally 18 radon baths per year. For maximum therapeutic effect, you may take up to twenty-four (during stays longer than 4 weeks). **Only one radon bath (for a try) can be taken without a medical prescription.**

Our specialty is the so-called Jáchymov boxes, or brachyradium therapy, which we provide exclusively in the Radiology Pavilion.

This over 100 years old treatment method helps to relieve such pain for which available medicines are no longer effective. It is a controlled application of gamma radiation directly to a painful joint, spine or tendon. The source of radiation is radium salts placed in tubes. Radiation doses are accurately calculated and have significant analgesic and anti-inflammatory effects.

In indicated cases, these radiation boxes are applied as prescribed by the physician once per stay.

TREATMENT OF THE WALK-IN CLIENTS

You can also book and undergo radon baths and other spa treatments on an outpatient basis (walk-in client).

These are offered in the Spa center Agricola, where a previous reservation is necessary.

RESERVATIONS AND OPENING HOURS:

Monday - Friday: 8.00 - 14.00

Agricola Spa Center
